Universal Decking Connector

- Simple and effective concealed fixing system for installing deck boards
- Made from 304 grade stainless steel
- Available either uncoated (stainless steel finish) or stainless steel coated in a black finish
- Includes stainless steel screws and driver bit

Our Universal Decking Connectors are a simple and effective concealed fixing system for installing deck boards, where hidden fixings are preferred. The connectors are screwed to the bottom of the boards and then screwed to the joists, so there are no fixings through the face of the boards.

Universal Decking Connectors are made from 304 grade stainless steel. They are available either uncoated (stainless steel finish) or stainless steel coated in a black finish which makes them slightly less visible through the gap between the boards. Stainless steel screws are included, along with a suitable driver bit.
