Decking Installation Aid

These installation aids help quickly position screws and help create a consistent gap between decking boards, speeding up the installation process.

- Deck board spacer and drilling guide
- Can create gaps of 5, 6, 7 or 8mm between deck boards
- Drilling guide 15, 20 or 25mm from edge of deck board
- Compatible with the Universal Decking Connector
- Available as a kit or pack of four

The Decking Installation Aid is a clever device designed to help create a consistent gap between deck boards and to help quickly position screws in the exact location on the deck board. This not only speeds up the installation process, but also helps make the finished deck neater and more visually appealing by helping to ensure that gaps between boards are equal and the screws are in the exact same position on the deck board throughout.

The Decking Installation Aid has two different sides measuring 5mm and 7mm thick to accommodate different gap requirements. If an additional 1mm is required, the aid can be easily transformed by breaking off the adapters situated on the side and sliding them into the slots to create a 6mm or 8mm spacer.

Simply insert the Decking Installation Aid between the boards and leave it in situ whilst the boards are fixed to ensure the gap remains consistent. Deck boards can be pre-drilled through the guide holes, thus eliminating the need to measure and mark each position. There are three guide holes positioned 15mm, 20mm and 25mm from the edge of the deck board.

The installation aids are sold in packs of four or as a kit, which includes two installation aids, a drill bit and two 50mm T25 star drive bits.
